

TAYLOR CHRISTIANSON

Senior Gameplay Engineer | Unity & C#

SKILLS

Languages: C# • C++ • HLSL • HTML • Next.js • React • Tailwind

Engines & Tools: Unity (URP/HDRP/6/Cloud) • Photon Fusion • FMOD • Steam • iOS & Android

Software: Perforce • Cursor AI • Claude Code • Git • TeamCity • JetBrains Rider • Visual Studio

Specialties: Multiplayer & Netcode • Game & Systems Design • Procedural Generation • UI/UX Implementation • Shaders & Tech Art • AI Systems • Editor Tooling • Rapid Prototyping • Profiling & Optimization • Agile/Scrum • AI-Assisted Development

EXPERIENCE

Senior Unity Developer & Lead Designer - *Panda Paw Entertainment*

MAR 2026 - SEP 2026

- Pitched, designed, and built CatchUp Showdown, a co-op multiplayer climbing game, from concept to a live Steam demo in two months. Releasing at Steam Next Fest, October 2026.
- Architected the multiplayer on Photon Fusion around a fully deterministic level system so all players build a bit-identical world off only 2 networked values, then built the host-authoritative scoring and trick-combo system on top.
- Built complete uGUI front end (HUD, main & pause menu, shop) on a generate-then-author workflow. Code generated and wired for consistency, then hand-repainted, animated in-editor.
- Owned Guard AI, gadget systems, operator systems and tooling for Swipers, an asymmetric co-op heist game (in dev). Guard AI used a component-based state machine with dual-zone vision and FMOD audio-driven hearing.

Lead Programmer/Project Lead - *Halfbrick Studios*

OCT 2021 - MAR 2026

- Architected Scraptics, a tactical hex-grid roguelike, from a one-week jam prototype through a three year production to closed beta on iOS and Android, owning the full systems stack: recursive puzzle algorithms, enemy AI, turn management and roguelike progression.
- Designed and implemented a modular, behavior-based enemy AI system that let the team prototype new enemy types without engineering dependencies.
- Completed a full performance overhaul in four weeks, taking the game from sub-20 fps with device overheating to stable 60fps ahead of beta.
- Led a team of four across full production lifecycle (technical direction, reviews and mentoring, and pitched 4+ jam projects, two greenlit for full production.

EDUCATION

Bachelor of Science in Game Development (B.S.) - *Full Sail University, Winter Park,*

NOV 2018 - JUN 2021

PROJECTS

Card Clash - Auto Battler (Next.js, React, TypeScript, Tailwind)(Web) - *Personal web project, built solo*

2026

- Built a full web app from concept to a live, playable build in about 3 days, using Cursor as a daily driver, with no prior professional web development background.
- Live at card-clash-auto-battler.vercel.app.

To The Moon! (Unity, Photon)(PC) - *3D Multiplayer Space Shooter*

FEB 2021 - JUN 2021

- Project Lead, Architected a comprehensive Photon networking stack to synchronize match management, weapon systems, and procedural map generation.
- Engineered high-performance AI ships utilizing steering behaviors and compute shaders.
